

SPONSORSHIP

Support Your Industry & Reach Key Customers and Prospects

This conference is produced by the SPE Composites Division, the SPE Miami Valley Section and the NCC-National Composite Center. The mission of this conference is to bring together industry suppliers, consultants, designers and engineers to review state-of-the art materials, processes and technologies, in the composites field, for the benefit of manufacturer's and others who can use composite materials in their products. "Composites On The Move - 2008" will address new applications in transportation, infrastructure, power generation and more.

Composites enable design, structural, and weight saving benefits to be achieved in many products in various industries. Yet, composites are only 1.5% of the materials market. Education, promoting, recognizing and communicating the technical advantages of composites materials is the key to increasing market share. This conference is an important step toward industry change to an increased use of composites.

Sponsoring helps to offset the cost of organizing the conference, allowing us to keep registration costs low and program quality high. It also allows us to invite a substantial number of OEM executives, material engineers, designers and purchasing decision makers. Your sponsorship support will benefit your industry, your company and you.

Who Should Sponsor?

Molders/component suppliers, resin/reinforcement producers, machinery & secondary-equipment manufacturers, filler/additive suppliers, consultants and service industry professionals involved with composites.

\$2,000.00 to Sponsor with an Exhibit Includes:

- **8' Table-Top Display at Conference**
- **Company Name in All Advertising, PR and on Signage at the Conference**
- **2 Passes to the Conference (A \$600.00 Value!)**
